PROFILE

Junior Full-Stack Developer with hands-on experience building and deploying web applications using React, Next.js, TypeScript, Node.js, and RESTful APIs. Experienced with authentication, databases, API integration, responsive UI development, and modern Git/GitHub workflows. Currently focused on building full-stack applications with the MERN stack. **US Citizen – No sponsorship required.**

SKILLS

Frontend:	HTML, CSS, JavaScript (ES6+), TypeScript, React, Next.js (App Router), Tailwind CSS, Bootstrap, React Query, React Hook Form, Responsive UI Design, Form Validation & Error Handling
Backend:	Node.js, Express.js, RESTful APIs, JWT, Authentication & Authorization, Prisma ORM, Auth.js / NextAuth
Database:	MongoDB, Mongoose, PostgreSQL
Tools & WorkFlow:	Git & GitHub, Vercel, Figma (UI/UX Design & Prototyping), Jest, React Testing Library, API Integration, Client-side State Management, GitHub Issues, Feature Branches, Pull Requests, Incremental Commits, Refactoring, Debugging, Deployment Verification (local → preview → production), Responsive Design, Accessibility, Form Validation

EDUCATION

- Full-Stack Web Development (Self-Directed Training) — 2025**
Completed hands-on training through professional courses and bootcamps covering modern frontend and backend technologies, including React, Next.js, TypeScript, Node.js, Express.js, RESTful APIs, MongoDB, and PostgreSQL.
- High School Equivalency Diploma (GED) — 2024**
California

EXPERIENCE

Full-Stack Developer – Independent Projects

January 2025 – Present

- Developed and maintained production-ready frontend features using React, Next.js, and TypeScript following task-based workflows
 - Planned and implemented features using small, isolated changes aligned with GitHub Issues
 - Worked with feature branches and pull requests to safely introduce new functionality and refactors
 - Built secure authentication flows using Auth.js / NextAuth, including protected routes and session handling
 - Integrated REST APIs and managed server-side state with React Query, handling loading, error, and empty states
 - Designed reusable UI components and responsive layouts with Tailwind CSS and Bootstrap
 - Refactored existing code to improve readability, performance, and long-term maintainability
 - Deployed applications to Vercel and verified builds through preview and production environments
 - Debugged UI and data issues reported during testing and post-deployment
 - Designed UI layouts and dashboard interfaces in Figma before development to plan user experience and ensure consistent design implementation
-

PROJECTS

Job Tracker – Full Stack Application:-

- Built and maintained a full-stack job tracking application using Next.js App Router, React, Prisma ORM, and PostgreSQL
- Implemented secure user authentication and protected routes using Auth.js / NextAuth
- Designed and implemented API routes for creating, updating, deleting, and retrieving job applications
- Managed server state and API interactions with React Query, including loading, error, and empty UI states
- Developed features incrementally using a feature-branch and pull-request workflow
- Deployed and validated production builds on Vercel with Neon PostgreSQL to ensure stability
- Used weekly by 50+ users to efficiently track and manage job applications
- Designed and prototyped the dashboard UI in Figma before development, improving layout planning, user flow, and component structure
- Translated Figma designs into responsive, production-ready UI using Tailwind CSS
- Live Demo: <https://job-tracker-bice.vercel.app> | GitHub: <https://github.com/Eagle-2026/job-tracker>

Todo App – React Application:-

- Developed a responsive task management application using React and Material UI
- Managed global application state using React Context API
- Persisted tasks using localStorage for session continuity
- Implemented filtering, dark/light mode, and toast notifications for user feedback
- Implemented improvements through small, testable changes and verified behavior before deployment
- Live Demo: <https://todo-list-two-kappa-56.vercel.app> | GitHub: <https://github.com/Eagle-2026/todo-list-2025>

Form Project – React Form Application:-

- Built a multi-step form using React and Tailwind CSS for collecting employment data
- Managed form state across steps using React Context API and persisted progress using localStorage
- Designed reusable components and responsive layouts for consistent UI behavior
- Implemented improvements through small, testable changes and validated behavior before deployment
- Live Demo: <https://employment-form-2025.vercel.app> | GitHub: <https://github.com/Eagle-2026/employment-form-2025>
